

# Pallet Rinse

## PALLET RINSE UNIT

### Innovative pallet rinsing in a space-saving design

The Wes-Tech Pallet Rinse Unit is designed to automatically rinse pallets of excess coolants, chips, and debris. This compact design is self contained, and can be retrofitted into most conveyor systems. The Wes-Tech Pallet Rinse Unit will increase your cleanliness, throughput, and profit without increasing your cycle time or footprint.

Our innovative designs offer a variety of features and benefits:

#### Innovative

- **Rinse on demand:** Pallets can be selectively removed from the conveyor line for on-demand rinsing, even as other pallet traffic continues to move through the station.
- **Flexible setup:** The standard unit can connect to existing plant coolant supply and reclamation systems, or can be provided with a closed-loop reclamation system.
- **Controls to meet your needs:** The standard unit is controlled by the main conveyor PLC system, or can be provided with optional stand-alone controls.

#### Saves space

- **Small footprint:** Minimal floor space and utilities compared to a traditional flow-through pallet wash system.
- **Standard models:** Standard pallet rinse units are designed to work with the Tech-Trak® 1700 and 2500 series conveyor systems.
- **Custom options:** Custom units can be adapted to work with virtually any power and free palletized conveyor system.

## STANDARD UNIT FEATURES AND SPECIFICATIONS

### UTILITIES REQUIRED:

Pneumatics	80 psi
Electrical	480v/3ph/20a
Coolant Pressure	40 psi

### FOOTPRINT:

Enclosure Width	57"
Enclosure Depth	64"
Enclosure Height	85"
Conveyor Section	96"

## Our Promise

At Wes-Tech, practical solutions have been our number one priority for more than 40 years. As one of the largest suppliers of automation in the country, we have integrated systems in every major industry. We design with your needs in mind, and our goal is to deliver the right solution, right when you need it.

**Right. Now.**
